MBE ThermaSkin

\$16 860.00

THERMA-SKIN is an exclusive MBE device for treating signs of facial ageing. (Thanks to its innovative synergy of radio frequency and photodynamics, this highly effective technology leaves skin looking younger, softer and more velvety.

Wrinkles, couperosis and slack skin are the main facial skin flaws that affect women, often from the ages of 30 onwards. Compared to the numerous cosmetic products available on the market and other devices based on technology that is now outdated, THERMA-SKIN is the most effective and highly advanced solution to this kind of problem.

The synergy

The system works by combining radio frequency and photodynamics, a synergy that guarantees astonishing results. While radio frequency warms the tissue, making the skin look healthy and velvety, red photodynamic light stimulates and smoothes it, creating an amazing lifting effect.

This combined action is a highly advanced solution for really rejuvenating the face. The treatment is simple, painless, non-invasive and does not affect the customer's daily activities. The therapy can also be used on all kinds of skin as it is non-surgical and non-ablative. And the results can be seen right from the very first sessions!

The treatments

The treatment is performed using two handpieces, each with its own specific functions: (• the first handpiece has two poles that emit red light, allowing the therapist to work directly on the edges of wrinkles and mood signs (• the second, flat handpiece combines radio frequency and photodynamics and is ideal for treating large areas, as it combines bio-stimulation with an efficacious lifting effect.

Each handpiece corresponds to one or a series of preset function programs that include the following

treatments:(WELL-BEING PROGRAMS (COUPEROSIS (WRINKLES (NECK (ACNE SCARS

The device can also be programmed by the operator to create specific, personalized treatment programs. (So it offers maximum freedom of manoeuvre too!(All treatments include the application of a special fluid created by the Maya Beauty R&D laboratories.

The technology

RADIOFREQUENCY

Radiofrequency consists of the emission of electromagnetic waves. In beauty care these waves are applied to the body in order to carry energy and heat deep into the skin without altering the epidermis in any way.(Applying radiofrequency produces a number of beneficial biological effects on the treated tissue and stimulates physiological processes that have slowed down to return to normal functioning.(More specifically, releasing a carefully monitored quantity of energy on the skin creates an endothermic effect that triggers a series of very special processes including:(- a skin tensor effect(- a wrinkle filler effect(- a firming effect(- microcirculation stimulation(- increased oxygen supply and cell nutrition, (- increased cellular metabolism

PHOTODYNAMIC ENERGY

In beauty care photodynamic energy consists of projecting a beam of light onto the skin.(As demonstrated by medical research, photostimulation is extremely useful in reconditioning skin damaged by the physiological phenomena of chronoaging and photoaging. More specifically, the beneficial effects can be seen in terms of:(- wrinkles being gradually filled and smoothed away, (- fibroblasts being stimulated resulting in a stronger and restructured dermis.

When used in synergy with radiofrequency, photodynamics have a tensor effect on the skin and leave the face looking brighter, more elastic and better toned.
