BHS 302

\$17 075.20

Standard model:

(Endermology and Dermoleds)

With all options:

(Endermology, Dermoleds, Microdermabrasion, Virtual Mesotherapy, Ultra sound)

BODY HEALTH'S Research and Development department has developed an innovative machine: BHS 302, the perfect combination of technology, unique and elegant design and functionalism.

Five excellent therapies can be applied. Such therapies have been thoroughly studied to bring about the best results:

Corporal and Facial DERMO HEALTH , a vacuum therapy that uses a high-revolution axial turbine which produces a continuous suction at a constant flow. It prevents the skin and tissues from being damaged; thus, better results are achieved in fewer sessions.

Virtual Meso Therapy with applicators exclusively designed for the face and body (Roll One and Roll Five), highly effective to apply Dermoporation® (transdermic substances are used to treat different disorders).

Ultrasound System therapy with applicators of 1 MHZ and 3 MHZ. A maximum power of 3.5 Watt/cm² is obtained due to the use of barium titanate disks.

Dermoleds of 5 and 8 L.E.D., which stimulate the regeneration of collagen and elastin fibres.

Microdermabrasion with exclusive Diamond Sticks®- disposable diamond ends- which preserve the abrasion properties in each new treatment.

DERMO HEALTH and Dermoleds® treatments can be applied with this elegant, sober and simple equipment, in its standard version; the kits specially developed for Mesotherapy without needles, Ultrasound and Microdermabrasion can be easily incorporated.
